

PERIFLO PUMPS IN ACTION

ChemTUFF Pumps in Action

PeriFlo ChemTUFF pumps with PeriFlo Controls & Digital SCADA Communications metering Sodium Hypochlorite at a North Carolina Water Treatment Plant.

Low Maintenance: These CT13 pumps with Norprene tubes will deliver 1.7 to 33 gph of 15% NaOCL for a full year without a tube change. We anticipate a 1 year preventive maintenance program to replace the tube annually. *That's long tube life ... and low maintenance !!!*

Digital SCADA Communications: The PeriFlo NEMA 4X controls offer a Digital SCADA communications interface – completely eliminating all hardwired I/O. All communications with the host SCADA system are over a single Ethernet LAN with simple RJ45 plug-in connections using standard Modbus TCP/IP communications protocol. Easy to install and easy to integrate, this design saves days of installation time and \$1,000's per pump in electrical materials, labor and overall installation cost.

Corrosion Resistant: Rugged ChemTUFF pumps feature outstanding chemical metering capability in a completely corrosion resistant design. HALAR coated housings and one-piece non-metallic roller/bearings provide corrosion resistance in a simple, robust design. Chem - duty, washdown-duty and inverter-duty motors offer maximum reliability in harsh environments.
