

Periflo Pumps

Periflo is a leading U.S. based manufacturer of a broad range of peristaltic pumps, pump systems and controls. With over 25 years of peristaltic pump experience and 22 models to choose from, Periflo pumps everything from pigments and dyes to battery anode paste and potato salad, in diverse applications from food processing, to municipal sludge transfer, to aggressive chemical metering.

Major Products

Periflo offers 22 models of peristaltic pumps from 10-mm to 100-mm with flow rates from 0.03-gph to over 400-gpm and pressures to 220-psi. Periflo's heavy-duty peristaltic pumps are designed to handle highly abrasive slurries, viscous or shear sensitive fluids, and aggressive chemicals that would normally result in severe damage to rotors, stators, gears, mechanical seals and check valves of other more traditional positive displacement designs.

Chemical Metering

Periflo's ChemTUFF pumps and controls are designed specifically for metering aggressive, corrosive chemicals in municipal and industrial applications. Backed by a full 3 year warranty, the robust, corrosion resistant ChemTUFF design provides a chemical metering pump rugged enough for 24/7 service in a hostile environment with 6 to 12 month tube life in

normal operation.

Sludge Transfer

Periflo's FMP and RBT pumps are designed to pump thick, highly abrasive fluids with little or no wear. Their compact "direct-connected" design maximizes gearbox life by eliminating all radial loading of gearbox bearings. Pumps and drives are perfectly aligned through register fits, eliminating costly alignment issues, unreliable flexible couplings and external coupling guards.

Controls Capability

Complete UL Listed control panels in standard or custom designs, with digital or hardwired system interface, provide unmatched pump performance and state-of-the-art network communications capability.

Packaged Pump Systems

Periflo offers complete engineering, design and fabrication of turnkey process skids and control packages. Chemical metering, blending, injection or other basic process skids include factory testing and calibration for simple installation and quick, easy field start-up.

Technical Support

Periflo pumps, pump systems and controls are designed and manufactured in a modern 16,000-sq ft headquarters facility in Loveland, OH. A distribution network of more than 40 fully trained representatives across the U.S. and Canada are backed by a Periflo staff of highly experienced application engineers, expert designers with the latest 3D modeling techniques and trained service technicians. Extensive inventory support, quick deliveries and a 24/7 emergency hotline assure outstanding customer service.

PERIFLO

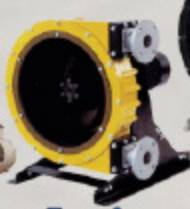

PERISTALTIC HOSE PUMPS

Simple, Reliable Pumping:

- No Mechanical Seals
- No Damage from Dry Running
- No Wear from Abrasive Media
- Self-Priming to 27'
- Incredibly Easy to Maintain ...

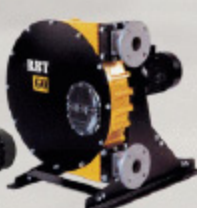

Batching

Transfer

Chem Transfer

Flows to 232 GPM

Chem Metering

... Just Change the Hose !!!!
